- OPTIONAL – Format the flash file system if needed Cisco Router Ios For Gns3(This will remove your startup configuration)
- Set the baud rate to 115200 to increase xmodem transfer speed and decrease time required to restore the IOS Image.. Set the IDLE PC value,etc then the EtherSwitch should appear in your list: • Now you should have a working layer 3 switch with about 16 ports! I hope this helps! Remember you can use any router image all though I have only used the 3725 with this example.. Unfortunately fixed configuration switches require the use of xModem to restore a corrupt or missing IOS images unlike the Cisco 4500 and Cisco 6500 Series supervisor engines which use compact flash cards Step 1.
