The Smart Control Center Utility finds the switch and displays its MAC Address, IP Address, and model number.. If you cannot configure your switch, verify that the cable connections are secure, that the IP address configuration of the PC is in the same subnet as the switch, and click the Discover button.. Install the NETGEAR Switch Discovery Tool on your Mac or a 64-bit Windows-based computer.. The utility can help you to discover smart switches in your network, manage mass firmware upgrades, perform mass configurations, and perform other tasks such as IP address assignment.. That is why NETGEAR launched its new Multi-Gigabit Smart Managed Pro Switches with 10G Copper/Fiber Uplinks. 6e4e936fe3 [Megaman X8 100 Save File Pc](#)
